- Understanding voice commands over the phone
- Support for recurring appointments and events
- Support for group calling
- Built-in contact management

Voicent AutoReminder™

For years, large businesses have depended on specially designed software systems to handle their professional reminder calls, from hospital appointment reminders to overdue video rentals to political campaign promotions. Unfortunately, these systems can cost thousands of dollars, putting them out of budget for most private practices and small businesses. Until now.

Voicent AutoReminder does everything the systems used by large businesses do, at a fraction of the price. It's an incredibly easy-to-use, yet powerful software package, specially designed for professional practices and small businesses, that completely eliminates the tedious, repetitive task of reminder calling.

Voicent AutoReminder works seamlessly on any office PC. It's so simple, you can set it up in minutes. And so reliable, you can trust it to free up staff for more pressing work while saving on postage and printing expenses.

Reduce Costs and Increase Profits

Voicent AutoReminder can help lower costs and bring in more income. In a doctor's office, for example, you no longer have to pay for printing and postage to send out mailed reminders. And because it diligently calls to remind all your clients of their appointments, it reduces no-shows and reduces rescheduling, assuring that your schedule stays full, your day more productive.

Use Staff Time More Efficiently

Voicent AutoReminder frees up your assistants from a tedious task, giving them more time to better serve your clients. And, thanks to its built-in appointment book, your staff can create, reschedule, and cancel appointments and manage contact lists and appointment categories more quickly, accurately and easily.

When your assistant is on vacation, Voicent AutoReminder is invaluable. It keeps working, 24 hours a day, 7 days a week, making sure that every one of your clients is reminded of upcoming appointments.

Enhance your Professional Image

With Voicent AutoReminder, each clear and friendly reminder message is recorded in a sound studio by a highly professional radio announcer, assuring you of consistent, pleasant-sounding voice that is unaffected by mood, poor grammar, or a strong accent.

How it works?

Create an appointment with reminder call by setting contact name, phone number, appointment date and time, and the time to call.

That's it! So simple.

AutoReminder makes the reminder call at the specified time.

The call status is reflected in the Appointment Book.

All automatic!

The standard message

"Hi, this message is for [Contact Name]*. You have an appointment with [My Name] at [appointment time]. If you cannot make it, please call our number at [My Number]. If you want to hear this message again, please say 'play again', otherwise, please say 'OK' or simply hang up."

* Text inside [] will be spoken over the phone using our advanced text-to-speech technology.

So Simple to Use, It Practically Does Everything Itself

Voicent AutoReminder couldn't be easier to use. Simply create an appointment in the AutoReminder appointment book and set the phone number and time to call. Voicent AutoReminder takes care of the rest. The system automatically calls each person at the time and date specified. Thanks to its incredible text-to-speech technology, the date, time, callback phone number, and contact information are all included in the reminder message.

If the line is busy or nobody picks up the phone, Voicent AutoReminder will try again. It even recognizes the difference between a live person and an answering machine, tailoring its message to each automatically.

Never Again Have to Make Difficult, Tedious, Or Routine Calls

Plus, the AutoReminder system is not limited to appointment reminder calls only. You're free to customize messages, making it just as easy to set up calls for anything you'd like, such as overdue bill collection – further reducing mailing costs and helping make sure bills are paid more quickly.
